CAREQ-ENS

CAREQ-ENS is a two-way communication system that provides administrators and managers with a way to reach staff quickly in the event of an emergency, as well as providing a platform through which staff can respond with positive or negative availability. It is designed, specifically, for care facilities and is accessed from any internet-enabled device and staff do not require an app to receive or respond. The CAREQ system provides a much-needed supplement to existing, and often time-consuming, telephone fan-out protocols.

A NBANH Corporate member since 2018.
